

## Effective Subscription Collection Management

The Serials module provides streamlined access to everything your library needs, from order placement through receipt. Easily control and maintain your library's serials collection in the most efficient way possible – including the ability to modify prediction algorithms on-the-fly, without having to start from scratch each time the frequency of a serials publication changes. The Serials module works seamlessly with the Cataloging and Acquisitions modules to minimize data entry and improve workflow throughout the VERSO® ILS system.

MANAGE YOUR SERIALS CHECK-IN, SUBSCRIPTION SETUP WITH EDITABLE PREDICTION ALGORITHMS, AND CLAIMS MAINTENANCE FROM A SINGLE INTERFACE.

### Features

- Create records for new subscriptions, monitor issues received, and process claims.
- Indicate receipt of the first issue, continuing issues, and special issues for each active subscription in your library's database. Save and reuse vendor arrival patterns for future orders to avoid repetitive data entry.
- Prediction algorithms can be instantly changed on-the-fly via simple drop-down menu selections - unique to VERSO.
- Easily extract, review, print, approve, and manage claims.

### Benefits

- Manage your subscription-based publications with our complete turnkey system.
- Check-in issues at the library, branch, or multi-institution level.
- Save valuable time with dynamic prediction algorithms. Bypass starting over from scratch each time the frequency of a publication changes.
- Process and manage claims from a single screen for improved workflow.
