

AGent MARCit™ is a user-contributed MARC resource that enables public libraries to share over 20 million quality bibliographic records. Utilizing our proven Web-based AGent™ technology, AGent MARCit provides catalogers with a single point of access to the Library of Congress databases and all other user-contributed cataloging resources in a federated search environment to significantly streamline workflow. Auto-Graphics offers an annual subscription with an easy-to-use interface and exceptional personalized service at a fraction of the leading cooperative's price.

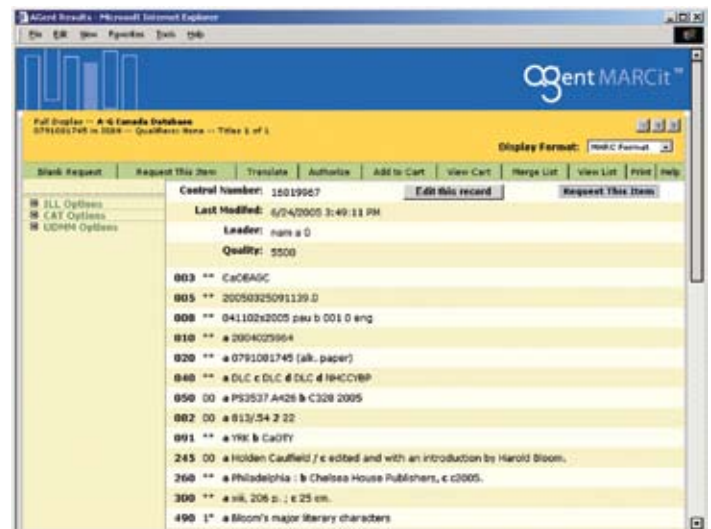

Integration with Other AGent™ Products

- » AGent VERSO™ provides a complete, 100% Web-based integrated library system (ILS).
- » AGent Resource Sharing™ provides a robust interlibrary loan solution (ILL) that seamlessly supports requests sent among consortium members, as well as those to external trading partners within a union, virtual, or hybrid database environment.
- » AGent Search™ provides a powerful information discovery solution that enables libraries of all types and sizes to quickly and intelligently search unlimited and disparate content sources from a single interface, while easily managing aggregated results. The product employs a single login, via sophisticated, layered authentication and authorization methodologies.

1. Access over 20 million quality bibliographic records through the AGent MARCit advanced search screen.

2. Select the record and view metadata in MARC format on screen.

3. Authorize records via online interactive authority control, instantly matching and updating bibliographic headings to authoritative forms.

4. Then use the AGCat Editor MARC tool for saving, editing, copying, and deleting records.
