

AGent Illuminar™

AGent Illuminar was developed as a Web Services application using the free, open source Adobe Flex® framework, which enables graphic transitions and design features in a more visually pleasing interface while retaining and enhancing the underlying functionality of the AGent platform. AGent Illuminar provides intuitive navigation, using web cues already familiar to many web-savvy patrons, as well as a “wizard-like” advanced search screen that utilizes prompts modeled from popular search engines. In addition, AGent Illuminar employs innovative, attention-grabbing display technologies such as 3D Flip and Cover Flow book jacket display, made popular by Apple iPod®, as well as enhanced drag & drop functionality and the ability for patrons to modify their own user experience through “My Lists” and “My Account” customization options.

AGent™ Suite of Integrated Products

Auto-Graphics’ commitment to delivering innovative and standards-based solutions revolves around its AGent suite of integrated products, which offers a library automation platform currently used by more than 6,000 libraries in North America. The AGent Illuminar user interface is available for all products in the AGent platform including AGent VERSO™ a powerful Integrated Library System (ILS) for public libraries; AGent Resource Sharing™, patron-initiated, library-managed, and consortium-administered resource sharing; and AGent Search™ a highly developed federated search product.

Kids' Catalog

Auto-Graphics' Kids' Catalog user interface provides an appealing icon-based discovery tool ideal for children's rooms as well as K-6 school media centers. All Kids' Catalog systems come complete with a customizable preconfigured icon-based search component. The system automatically updates the interface, adding or deleting displayed icons within the interface based on the items that the library has in its collection.
